RE: Reference for Energy Conscious Design and EcoSolar for the installation of the SKYCITY Solar Water Preheat System.

Dear Ian,
we have pleasure in providing you and your company this reference following the design and installation of our solar water heating preheat system between November 2009 and May 2010.

SKYCITY Engineering Services found you and your staff extremely professional in your approach to and undertaking the design and installation of our solar water heating system. Your design was innovative, overcoming several technical challenges and has resulted in a very high system performance and efficiency that has allowed us to maximise the savings provided by our energy savings.

The installation was completed on programme with minimum disturbance to both our Casino and Hotel operations. The shut down of services to the Casino and Hotel was completed successfully at our quietest time at night with minimal impact and was completed diligently, with good communication and professionalism. The regard we hold you and your team is deserved for a difficult job done well.

The completed installation has been inspected by our trades staff, management team and other professionals in the building services industry, and the high standard of workmanship elicited positive comments all round.

We have no hesitation in recommending you and your company to others and wish you and your team all the success for the future.

Thank you,

A handwritten signature in black ink, appearing to read 'J. Buys', with a small flourish at the end.
